All-

The end of year is quickly approaching. I am sending you this email because you had OPA site work this year. There are a number of steps that you need to take to make sure we get credit for it.

POLREPS:

It is important to make sure that you have completed your final POLREPs for responses/removals for those incidents/sites completed this year. For a final polrep to be complete, you need to have had it reviewed and distributed. I have notice some in the system that show final but have not been distributed. Please send me any POLREPs that need to be reviewed. POLREPS must remain private once they are distributed.

WEBSITE:

At this point, incident websites should have been made public. This should include at a minimum the front profile page. PII, enforcement info, CBI, POLREPs and other sensitive information should remain "private". If you have not already added the "Contaminants Info", you can do so by going to the profile page and hitting the "Edit Contaminants" button. You can find additional information on the attachment.

I will be reaching out to each of you individually this week to makes sure that you are done. Thanks for your assistance.
